

MODA INTERACT

# Merchant User Manual

Using Moda Interact inside Shopify

---

|                      |                                                        |
|----------------------|--------------------------------------------------------|

This manual describes the merchant-facing behaviour present in the reviewed Moda Interact workspace. Some onboarding and product areas remain under development and are identified as such.

# Contents

# Chapter 1

## About Moda Interact

Moda Interact is a Shopify application for abandoned-checkout recovery and merchant visibility into recovery activity, messages and billable usage. The application is embedded inside Shopify Admin.

**Current implementation note. This manual describes the merchant-facing code reviewed on 8 September 2026. The product is still being finalised. The current merchant interface includes onboarding/plan entry, usage overview, pending recoveries, recovery performance detail, billable usage, merchant-support messages and billing state.**

### 1.1 Who should use this manual

This guide is for Shopify merchants and authorised store staff who need to:

- open and navigate Moda Interact;
- understand recovery and usage information;
- review pending recoveries;
- inspect recovered/engaged checkouts and message history;
- contact Moda Support;
- understand their current Moda billing state and change/view plans through Shopify.

## Chapter 2

# Languages and regional formatting

Moda Interact currently includes merchant UI catalogues for 20 languages. The application also uses the merchant/session locale and store time-zone information for localized numbers, dates, times and money formatting.

| Code    | Language             | Code    | Language              |
|---------|----------------------|---------|-----------------------|
| zh-Hans | Chinese (Simplified) | zh-Hant | Chinese (Traditional) |
| cs      | Czech                | da      | Danish                |
| nl      | Dutch                | en      | English               |
| fi      | Finnish              | fr      | French                |
| de      | German               | it      | Italian               |
| ja      | Japanese             | ko      | Korean                |
| nb      | Norwegian Bokmål     | pl      | Polish                |
| pt-BR   | Portuguese (Brazil)  | pt-PT   | Portuguese (Portugal) |
| es      | Spanish              | sv      | Swedish               |
| th      | Thai                 | tr      | Turkish               |

**The manual itself uses the same locale codes for translated text and screenshots. For example, the French screenshot for the usage overview is named merchant-usage-overview.fr.png.**

## Chapter 3

# Opening Moda Interact in Shopify

Open your Shopify store's Apps area and launch Moda Interact. The app runs as an embedded Shopify application. The current app navigation includes **Home** and **Messages**; other views are opened from links within the app.

## Chapter 4

# Getting started and choosing a plan

### 4.1 Welcome / onboarding screen

When the store has not completed Moda Interact onboarding, the Home route displays a welcome screen explaining abandoned-checkout recovery and a **Choose a plan** action.

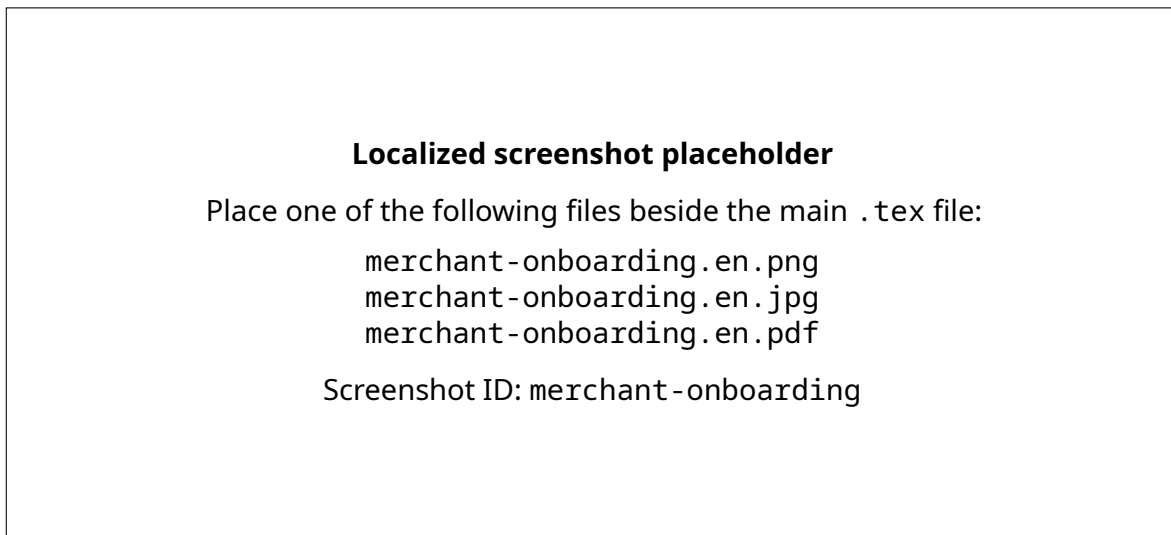

Figure 4.1: Merchant onboarding / Welcome to Moda Interact.

### 4.2 Plan selection

The current billing flow uses Shopify's app pricing surface. If no billing contract exists, Moda Interact redirects the merchant to the Shopify pricing-plan page for the app.

**Current implementation note.** The reviewed code stores an onboarding-completed flag and checks it before showing the main merchant views, but the current merchant code does not contain a complete self-service action that marks onboarding as completed. This part of the production flow is still evolving and should be updated in the manual once finalised.

**Localized screenshot placeholder**

Place one of the following files beside the main .tex file:

merchant-shopify-pricing.en.png  
merchant-shopify-pricing.en.jpg  
merchant-shopify-pricing.en.pdf

Screenshot ID: merchant-shopify-pricing

Figure 4.2: Shopify pricing-plan selection for Moda Interact.

## Chapter 5

# Home: Usage Overview

After onboarding is complete and a subscription is available, Home defaults to the **Usage overview** screen.

### 5.1 Current and past usage

The page displays two usage breakdowns:

- **Current usage;**
- **Past paid usage.**

Usage can be grouped into the following action types when present:

- Checkout recovery;
- Conversation;
- Agent message;
- WhatsApp message.

The current-usage card links to the current bill detail. The past-usage card lets you select a closed billing period.

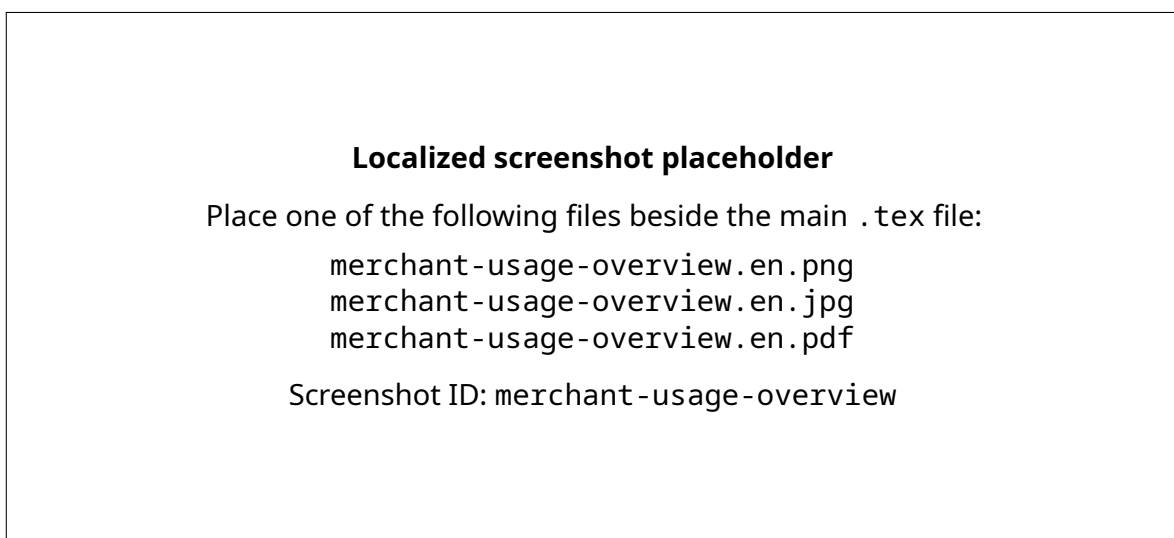

Figure 5.1: Merchant usage overview showing current and past usage.

## Chapter 6

# Pending Recoveries

The Usage Overview page also includes a **Pending recoveries** section. This shows active recoveries that are scheduled, waiting or currently processing.

The table currently includes:

- last activity time;
- scheduled recovery time;
- status.

Use **Refresh** to request a fresh pending-recovery snapshot. The view shows the last successful update time when data is available and supports pagination.

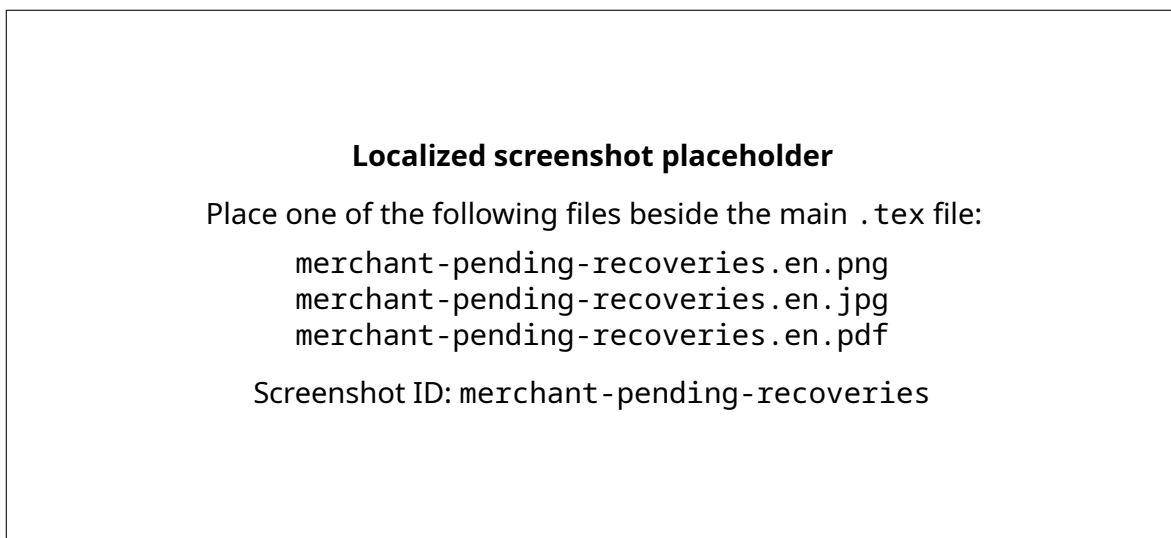

Figure 6.1: Pending recoveries with status and refresh controls.

**Current implementation note. If pending-recovery data is temporarily unavailable, the page shows an unavailable message and allows another refresh. This does not, by itself, mean all recovery processing has stopped.**

## Chapter 7

# Performance and recovery detail

From the usage overview, selecting a current or past bill detail opens the performance-oriented dashboard for that billing period.

### 7.1 Performance summary

The dashboard includes:

- abandoned checkouts;
- recovered checkouts;
- recovery rate;
- recovered revenue, grouped/formatted by currency where necessary;
- messages sent.

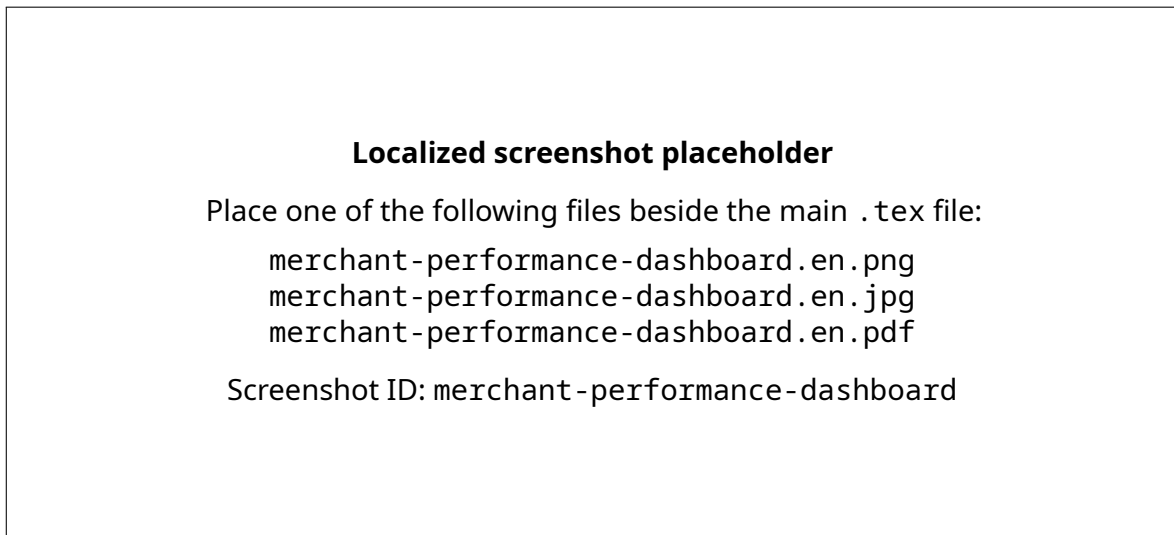

Figure 7.1: Performance dashboard and recovery breakdown.

### 7.2 Recovery breakdown

The recovery chart groups recoveries by status, for example Recovered, Engaged, Message sent, Detected, Expired or Cancelled when those statuses exist in the data.

Selecting a status filters the customer table. The table can show:

- customer;
- number of recoveries;
- total cart value;
- latest checkout date;
- message count.

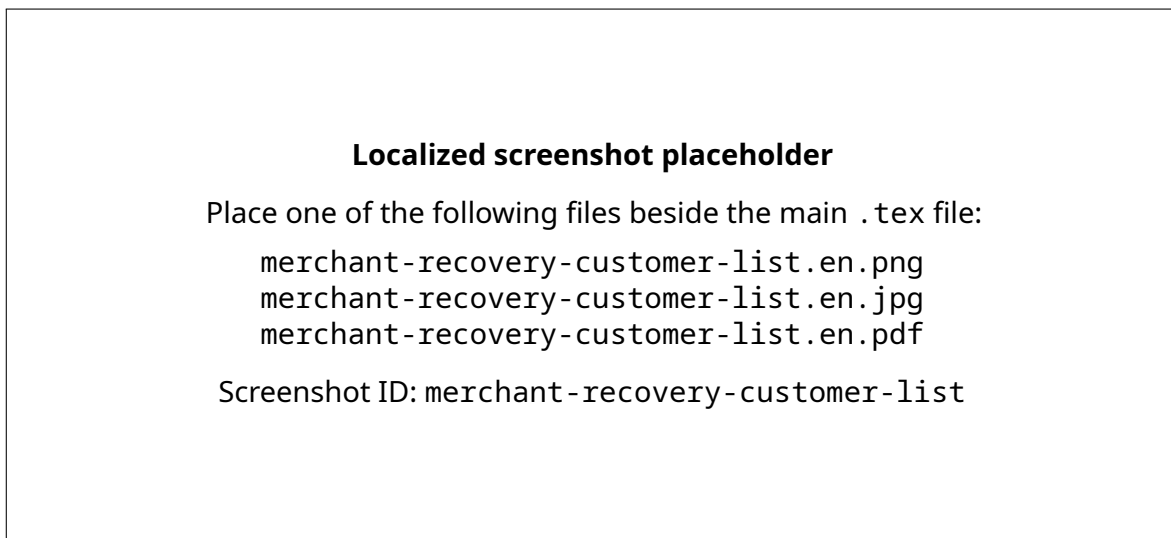

Figure 7.2: Customer/recovery list beneath the recovery breakdown.

## 7.3 Customer interactions dialog

Selecting a customer opens a dialog. Choose an individual recovery to inspect:

- recovery ID, status, value and detection date;
- conversation type;
- messages, sender, delivery status and time;
- billable actions, quantities, idempotency keys and recorded dates.

**Localized screenshot placeholder**

Place one of the following files beside the main .tex file:

merchant-recovery-detail.en.png  
merchant-recovery-detail.en.jpg  
merchant-recovery-detail.en.pdf

Screenshot ID: merchant-recovery-detail

Figure 7.3: Customer interaction dialog and selected recovery detail.

# Chapter 8

## Billable Usage

Select **View all usage for this bill** to open the detailed billable-usage table.

The current table shows:

- Action;
- linked Recovery, when available;
- Customer, when available;
- Quantity;
- Idempotency key;
- Recorded date.

You can choose 10, 25, 50 or 100 rows per page. For past usage, you can select a closed billing period.

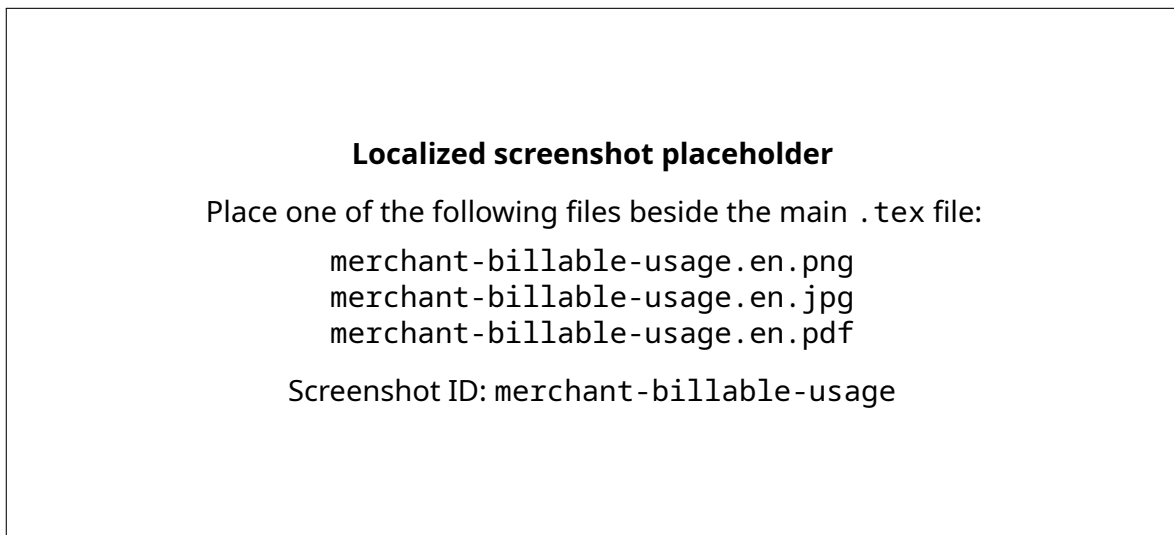

Figure 8.1: Detailed billable usage table.

### 8.1 What an idempotency key means

An idempotency key is a technical identifier used by Moda Interact to make usage processing repeat-safe. It is primarily useful when discussing a specific usage line with Moda Support. Merchants do not need to edit or generate these identifiers.

## Chapter 9

# Messages and Moda Support

Open **Messages** from the embedded app navigation to view your support thread. The navigation can show an unread-message count.

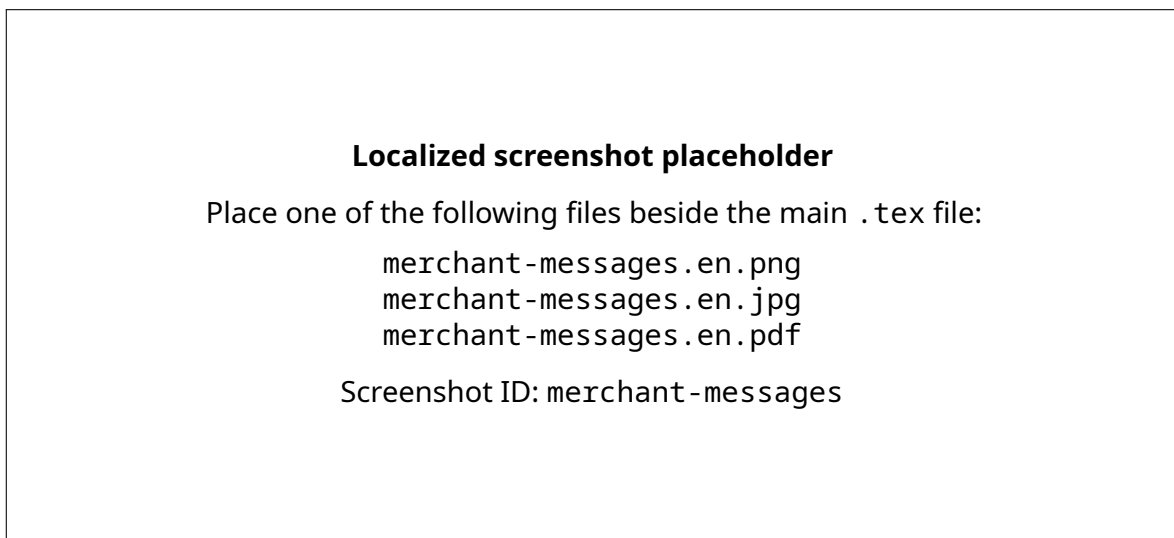

Figure 9.1: Merchant support thread and compose form.

### 9.1 Reading messages

The thread can include:

- messages you sent;
- administrative replies from Moda Support;
- system messages.

Available administrative/system messages are marked read when viewed by the merchant application.

### 9.2 Translations

When a support response has a translation, the message can provide a **View original / View translation** control. If the translated text is still processing or failed, the UI shows a status

message rather than pretending translated content is available.

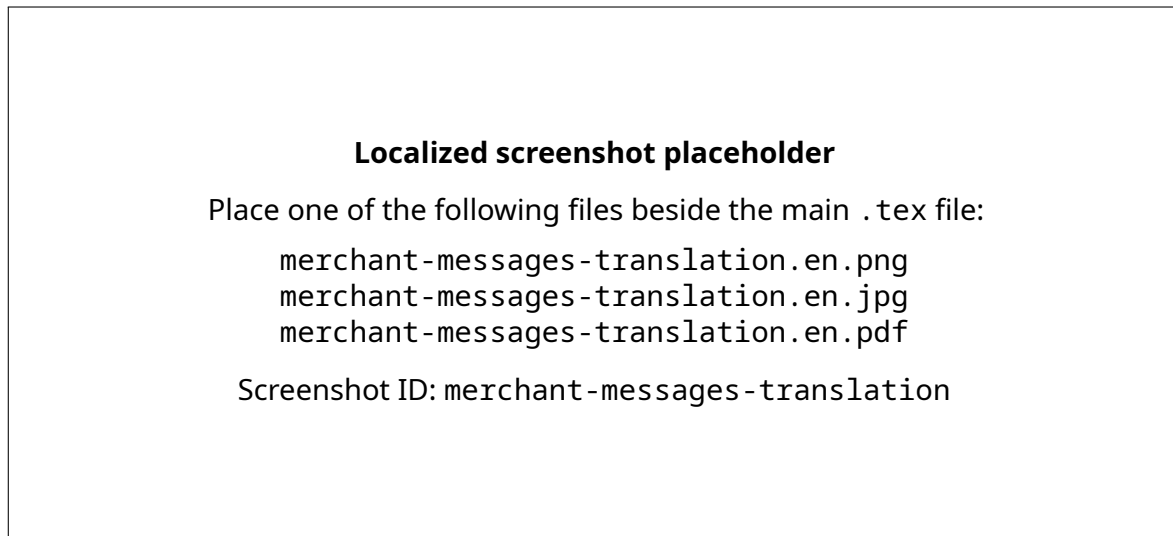

Figure 9.2: Translated support message and original/translation toggle.

**Current implementation note. Some merchant-support labels and validation text in the reviewed implementation remain hard-coded in English even though the main merchant catalogue supports 20 languages. This is a product-localization gap, not a limitation of the manual format.**

### 9.3 Sending a support message

The compose box accepts 1 to 500 Unicode graphemes and shows a live character/grapheme count.

When contacting support, include the minimum information needed to identify the issue, such as:

- what you expected to happen;
- what actually happened;
- the approximate date/time;
- the affected recovery or usage identifier if it is visible;
- a screenshot where helpful.

## Chapter 10

# Billing

Open the Billing view when directed from onboarding or when you need to review your current subscription state.

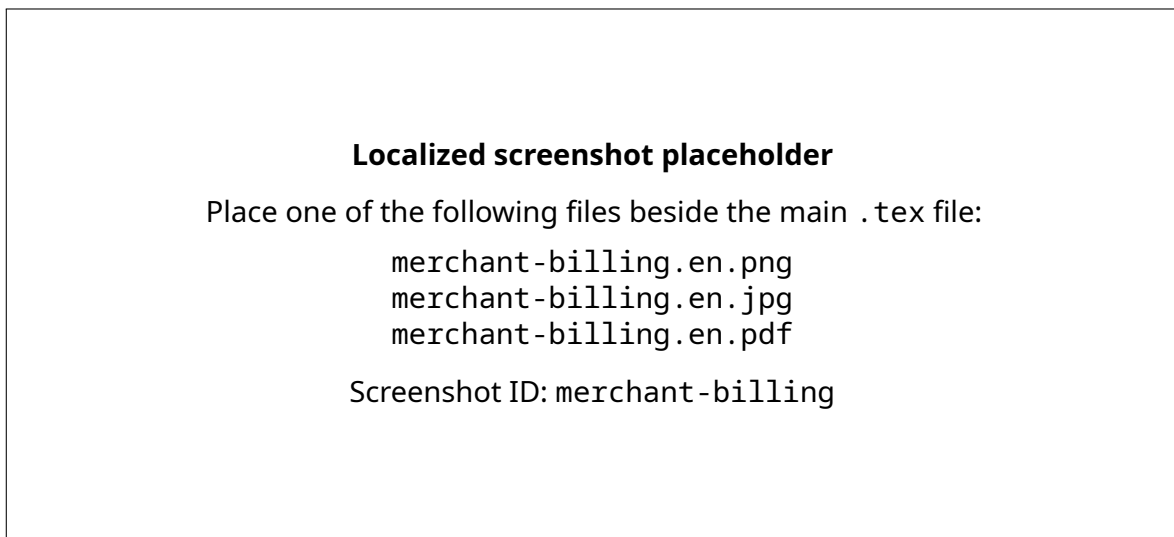

Figure 10.1: Merchant billing status view.

When the subscription can be safely mapped, the page can display:

- current plan;
- subscription status;
- Free allowance remaining for a Free plan, or recovery-conversation usage for a paid plan;
- current billing period;
- trial end date, when applicable;
- whether the subscription will end at the current period end;
- a pending plan change and effective date, when applicable.

The **View plans** or **Change plan** action sends the merchant to Shopify's app pricing-plan surface.

**If the page says billing configuration is unavailable, contact Moda Support before relying on paid features. The current UI deliberately avoids projecting a potentially unsafe billing state when the subscription cannot be mapped confidently.**

# Chapter 11

## Troubleshooting

### 11.1 Pending recoveries says Unavailable

1. Use **Refresh** once.
2. If other app pages work, continue using the app and note the time of the unavailable status.
3. If the status persists and you are expecting a recovery, contact Moda Support with the approximate time and affected checkout/customer information you are permitted to share.

### 11.2 I cannot see recovery data

Check that you are viewing the expected billing period and, in the detailed dashboard, whether a status filter is active. If the recovery still cannot be found, contact support with the checkout/recovery context.

### 11.3 A support translation is not available

The message may show that translation is processing or unavailable. You can continue to view the original text when the UI offers the original/translation toggle. Contact support if the translated version remains unavailable.

### 11.4 Billing shows configuration unavailable

Do not assume a plan or usage level. Contact Moda Support so the subscription-to-plan mapping can be checked.

## Chapter 12

# Current product gaps to be aware of

Because Moda Interact is still being finalised, this manual intentionally records current limitations:

- onboarding completion is represented in the data model, but the reviewed merchant code does not yet contain the complete self-service action that finalises it;
- some support-message UI strings remain English-only despite the 20 merchant catalogues;
- the exact commercial plan set is controlled through Shopify's pricing surface and may change independently of this manual;
- screenshots in each translated manual should be captured from the corresponding localized application/Shopify UI rather than reusing English screenshots.

## Appendix A

# Merchant screenshot IDs

Place localized screenshot files beside `merchant-user-manual.tex`.  
Use the filename pattern `<id>.<locale>.png` (or the equivalent `.jpg`, `.jpeg` or `.pdf`).

| Screenshot ID                   | Purpose                                 |
|---------------------------------|-----------------------------------------|
| merchant-onboarding             | Welcome/onboarding screen               |
| merchant-shopify-pricing        | Shopify app pricing-plan surface        |
| merchant-usage-overview         | Current/past usage overview             |
| merchant-pending-recoveries     | Pending recoveries table                |
| merchant-performance-dashboard  | Performance KPI dashboard and chart     |
| merchant-recovery-customer-list | Customer recovery list                  |
| merchant-recovery-detail        | Customer/recovery detail dialog         |
| merchant-billable-usage         | Billable usage table                    |
| merchant-messages               | Merchant support thread and compose box |
| merchant-messages-translation   | Translation/original message toggle     |
| merchant-billing                | Current billing status view             |
